Teaching Philosophy

- My basic educational approach
Being an Indian and having grown up with a healthy "Guru-Shishya Parampara," the excellent relationship between the student and teacher, I follow the Indian tradition of teaching and interaction with the students. This has been creating a healthy teaching and research atmosphere and resulting in excellent performance by students. I also use the modern teaching aids and introduce the latest trend of the research work to make my students up-to-date.
- How I work with the development of student learning
A student learns very fast if the topic is intriguing and related to his goal. A presentation using pictures, videos, and simulations helps to increase the subject's understanding. Therefore, while preparing a PPT file for a lecture, I use pictures, diagrams, simulations, etc., to explain the subject. I always correlate the topic with the student's objective.
- How I work with the development of my own learning
Learning is a lifelong process. A teacher or research scholar must engage in self-learning to stay updated with societal and scientific needs. I keep myself updated using literature surveys through the Web of Science/SciFinder. I use Endnote to store the searched data. I also use pdf files for reading.
- How I contribute to the organizational development of my institution
Hiring teachers who excel in both teaching and research can enhance an educational institution. The research helps develop state-of-the-art devices for society and brings funding to the institution. Students acquire new skills and secure employment opportunities with companies. As mentioned earlier, teaching helps a student to learn a topic fast. Because of my teaching capability and energy-based research experience, I will be able to fetch funding easily and produce energy-based skilled students.
- I have knowledge of contemporary teaching practices and experience in testing/assessment, quality assurance, standards for accreditation, e-learning, and curriculum/material design and development.
